NOVELTY - Manufacture of whole bean curd comprises preparing soybean milk, and adding a coagulating agent to the cooled soybean milk and then sterilizing it by a steam.

DETAILED DESCRIPTION - Manufacture of whole bean curd (I) comprises: (a) preparing soybean milk (II) by mixing minutely ground powder of raw soybeans with soft water and denaturing the obtained mixture by a steam activated with far infrared; (b) cooling (II) below room temperature; (c) adding a coagulating agent (III) to the cooled (II) and stirring the obtained mixture; and (d) sterilizing (II) by steam.

USE - To prevent various geriatric diseases.

ADVANTAGE - The manufactured whole bean curd exhibits good color, taste and can be stored for an extended period.

Dwg.0/0 CPI

FS CPI

MC CPI: A12-P01B; D03-B06; D03-H01T TECH UPTX: 20000712

TECHNOLOGY FOCUS - FOOD - Preferred Method: Sterilization of (II) by steam is separately implemented as a first heat sterilization at about 90-95degreesC and then a second heat sterilization of the sterilized (II) at about 120-130degreesC. The steam of about 70-80degreesC activated by far infrared for about 15-25 minutes is used. (II) is packaged by a plastic film which can shut oxygen after adding (II) to the cooled (II) and then the obtained mixture is stirred. (II) is cooled at about 3-8degreesC. The mixing ratio of the minutely ground powder of the raw soy beans and the soft water is about 1:5-6. (III) is 0.5-1 wt% based on a

whole amount of (II). (III) contains acetic acid. Preferred Additive: The functional additive is added with (III). The additive is selected from dried carrot powder, dried spinach powder, dried egg and yolk powder, safflower seed, ginseng, cheese, mushroom and bagneoncho (a kind of cactus).

TECHNOLOGY FOCUS - POLYMERS - The plastic film is made from polypropylene resin.
